

FleetNav™ Service Vendor Locator

In Need of Service While On the Road?

Maptuit is proud to offer a new application as part of our product suite. Our recently released Service Vendor Locator Application provides the user with the following helpful features:

- ~ Ability to search for Service Vendors near a disabled unit or along its current route.
- ~ Presentation of a list of preferred Service Vendors that are within a specified distance of the vehicle in need of assistance.
- ~ The vendor address, phone number and customer notes are displayed in the list for easy viewing.
- ~ Ability to request directions to and from the vehicle's location.
- ~ Ability to customize the proximity of a search.
- ~ Ability to prioritize vendors based on existing vendor relationships and best prices.
- ~ Accessible through the FleetNav Central application and tightly integrated with a variety of dispatch systems.
- ~ Service Vendor Locator product works directly with FleetNav Alert application.

This application makes it easy to track broken-down vehicles in your fleet, along with making sure that the truck receives the quickest and most efficient service. The vendor data can be a custom solution for each client, using the client's existing vendor information or Maptuit can recommend a database of service providers.

Maptuit's Service Vendor Locator Application is yet another way in which Maptuit can enable our customers to run their businesses in the most effective manner possible. Please contact Brian Ludwigson at 651-365-1490 with inquiries on this application.

Let Maptuit Help You Find the Best or Closest Vendor to Your Truck In Need!
